Experiences

ONETEC

Brussels, Belgium
(5 mois)

Intern
• Developed and created client websites from start to finish using current technologies and design trends while optimizing content for mobile and cross browser performance.

• Personally consulted clients with design suggestions and hosting recommendations in order to create designs based on client requests and business needs.

Projects

Github devfinder (JavaScript / HTML / CSS / API)
Web Simple web app that allows the user to search through the github user base to gather general info about developers from github. Uses the github API to fetch the various data. (Source:Frontendmentor)

Landing Page Fiber (HTML / CSS)
Classic Landing page design from Codewell. Build with mobile first in mind, it contains most of the primary component of a regular landing page.
• Designed, developed and shipped a web application.

• Enhanced the maintainability and the scalability of the code by implementing the react architecture for better data management in features such as likes, views, watchlist, and history.

BXL OpenData (JavaScript / HTML / CSS / API)
Web app that fetches data from the Open Data API to provide the nearest public WIFI network in Brussels. The static maps are generated with Jawg maps.
• Designed, developed and shipped a website.

• Enhanced the maintainability and the scalability of the code by implementing the architecture for better data management in features such as likes, views, watchlist, and history.
